DEPARTMENT OF CSE

PROJECT ABSTRACT SUBMISSION

COURSE TITLE & CODE : DATA SCIENCE (24AD3107) A.Y. 2026 - 2027

Title of the project	Image Classification	
S. No.	University ID	Name
1	2420030231	Sneha Bomma
2	2420030233	Kola Hitheshini
3	2420030445	Lalitha mahisri
Name of the Guide		DR.N.SUNANDA

Abstract

Image classification is a fundamental application of deep learning that enables computers to automatically identify and categorize images based on their visual features. This project focuses on developing a deep learning model to classify images using either the MNIST handwritten digit dataset or the CIFAR-10 dataset containing everyday objects. The model is trained on labeled images and learns important patterns such as shapes, edges, textures, and object features. A Convolutional Neural Network (CNN) can be used to extract these features and accurately classify unseen images into their respective categories. The project includes data preprocessing, model training, validation, performance evaluation, and prediction. Evaluation metrics such as accuracy, loss, precision, recall, and confusion matrix can be used to measure the model's effectiveness. The project demonstrates how deep learning and computer vision techniques can be applied to solve real-world image recognition and classification problems.
